

Lambo Guy — 03/05/2023 19:08

@everyone We couldn't do the session last night so here's a brief on what was supposed to be discussed. Memorize it.

- 1) Institutions always have an edge over the retail traders due to their influence, large amounts of investments, deals with exchanges and access to retail trading activities.
- 2) Exchanges including VC's & market makers in crypto specifically are all one and the same - The entire system is built to take advantage of the retail investors - for instance, retail traders have lost 100's of billions of dollars since 2013 till date while institutions have made ridiculous amounts of money both via conventional coins, defi, NFT scams & meme coins.
- 3) 18000 ICO's failed causing billions of dollars to flush out the markets since mid 2021 until late 2022. The entire system is rigged and controlled by a few.
- 4) Liquidations and stop losses - There's never been a market where manipulating the price of an asset was this easy and since crypto market is entirely run on sentiments & greed it makes the best play-ground for the institutions to take full advantage of the retail investors & the worst markets for uneducated and unaware population getting into crypto market. Their access to data is vast & it makes it easier for them to spot the exact entries of the vast majority of trades taken by the retail traders on a daily basis making it easier for them to spot their liquidations, entry & stop losses while retail traders can only guess their way to profits using a bunch of indicators & basic support/resistance levels.
- 5) They have and will continue to manipulate people & promote crypto to increase its adoption to the vast majority of the world - The more the retail investors in the markets, the more money there is to make for institutions. Statistic shows that 95% of the retail traders get completely liquidated within the first 90 days while on the other side institutions are always profitable. This is plain & simple.

@here Once you read it all, here's the most important part - The manipulation & theft has been made possible via future contracts, in several countries around the world it is banned and will sooner or later be banned in many other countries. More on this later.

Anas Qureshi — 04/05/2023 11:45

Topic: What is the best way to make money as a retail trader.

<https://www.youtube.com/watch?v=AlmX-Lm23Uo>

Lambo Guy — 05/05/2023 08:15

Video coming up in 1 hour on the following topics;

- 1) Time the tops/bottoms - (one of the easiest ways, there are several)
- 2) Short term investors/long term investors.
- 3) Tracking BTC adoption to understand where we currently are in the market cycle

Lambo Guy — 05/05/2023 08:44

Can anyone tell me why the price came back down to that level marked on the chart with the arrow and then moved back up rather impulsively?

07.05.23

Very important yet basic understanding of the market structure to spot weakness/strength in the markets to trade profitably.

I went short on PEPE at 6pm yesterday (marked on the chart) without the use of any indicators or even any oscillators at all. I need you folks to practise it and make 10 charts each and post them later here in the group.

PL - Previous low

LH - Lower high

LL - Lower low

07.05.23

Video 5

Watch the video carefully. This is how you trade on 15 sec timeframe.

Over the next 10-12 days you will learn how to catch the tops and know exactly when the price will drop/pump to make your trades upto 85% accurate and avoid FOMO and be more profitable in the process

This is part 2. Notice how the price came to my level and dropped 7.3% exactly from my entry price. This is to help you learn to stay patient when trading and only trade when the price comes to your level, never chase the price @everyone

08.05.23

While BTC is dropping - find the levels you believe it will bounce from but considering the strategies you have learned so far. I am not interested in your support/resistance and trendline stuff. Highlight the levels on your charts and see if it does bounce from there and track the %. It can take a day, two days or whatever. Simply highlight the levels and wait @everyone

Also figure out where your PL - LH & LL's are on atleast 3 different timeframes.

Start with 1 hour then 4 hours and then daily @here

09.05.23

GALA - DOT - LTC - XMR;

Highlight 4 areas of demand zones

Two of them should be which you call support and two of them should be resistance - Send the charts to the email provided and wait for them to see if these coins respect the levels you have drawn @everyone

11.05.23

Like I mentioned on the call yesterday and millions of times from the past 3 years. IGNORE CPI - CPI is only for noobs and stupid people and for those who are fucked, depressed and mental.

What you have learned about CPI so far is the basics which leads to confusion, panic or even baseless expectations. You must understand the entire mechanism of how everything functions, only then will it suit you to even utter the word "CPI".

Shit on the average joe around you and be different, disciplined, professional & wise.

Good morning @everyone

13.05.23
Video 6.1

Next session on combination of support and order blocks. This is something most have misunderstood. It will help you to predict if an order block or support will hold the price or it will break down before it happens I checked as many charts as I could before the internet disconnected.

@everyone

<https://www.loom.com/share/0b04e391430e43d08b7779c8a582f3c4>

- 1) Order block at the beginning of a trend is the best ones.
- 2) Order blocks where an impulsive move occurs to the upside is usually the best ones to trade.
- 3) Order blocks where impulsive drops take place are also the best ones.
- 4) Turn on your volume indicator on the charts and make sure there's good enough volume where the order blocks are created.
- 5) Start with higher timeframe and then go to lower timeframes to refine the levels and then demo trade on them.
- 6) Never assume it's an order block just because you see red green red or green red green candles together @everyone

14.05.23
Video 6.2

Review video part2 @everyone

16.05.23

Remember not to trade with a real account atleast until june 15th. I need you to be a little more patient. Soon you will be capable of making huge trades with 80-90% accuracy and I will teach how to find trades and how often you should trade. Demo trade for now or just highlight zones on your charts only to see how the price reacts when it gets there. You are subconsciously building confidence & finally when it's time you'll trade with conviction @everyone

18.05.23

Pay attention to this chart, it might look simple for some and complicated for others but always keep these sort of scenarios in mind when trading in real time @everyone

18.05.23

Somebody asked during the live session how to know if the order block is still valid or strong enough to hold the price. I explained it but here's another example on how to stay ahead of the market moves and predict the direction of the trend incase you are still confused @everyone

18.05.23

Video 7

Be quick - You have 48 hours @everyone

22.05.23

Video 8

This video will be ready in 15 minutes @everyone

Created the video last night but couldn't upload it due to bad internet for some reason.

<https://youtu.be/DXWraLYJfhc>

29.05.23

- 1) Left some blank to figure out yourself.
- 2) Name the rectangle area where the price seems to bounce after it's tested
- 3) I'll keep uploading 4 patterns a day to make sure it's easy to spot, draw & practise.
- 4) Have you seen these sort of patterns before other than retail stuff? @everyone

These patterns indicate the following ;

- 1) order blocks
- 2) Inefficiency
- 3) Secret price action schematic (pattern)
- 4) Engulf & TTM @everyone

020623

Video 9

Perfectly explained in this video & a beautiful chart to have an idea of how a professional approach makes trading look ultra bambu @everyone

020623

Watch the live implementation of the secret price action schematics here @everyone
